# Cloud IT Ops for Complex Environments

## Bringing Control to Cloud Chaos

For organizations that have moved to Azure — or rapidly expanded cloud workloads — operational sprawl is a growing risk.

Cloud environments evolve quickly:
- New workloads provisioned
- Costs drifting upward
- Governance inconsistently applied
- Performance issues surfacing unpredictably
- Migration projects completed without long-term operational ownership

Cloud growth without structure leads to instability. Anunta brings operational control to Azure and hybrid estates — stabilizing performance, governing cost, and owning Day 2 operations.

## Bringing Control to Cloud Chaos

Anunta inherits complex environments and applies a structured cloud operating model. We bring governance discipline, finops structure, Performance visibility, and ongoing operational ownership

**anunta®**

**CloudOptimal®**

Enhanced by CloudOptimal, our proprietary intelligence engine that identifies cost inefficiencies and optimization opportunities across Azure environments.

## Proven Impact

**Leading Financial Institution**

- 40% cloud cost reduction within 2 months
- Improved visibility into Azure consumption
- Established structured cost governance

**Multinational Energy & Utility Organization**

- Enabled secure, scalable cloud-based digital workplace
- Strengthened operational resilience
- Supported hybrid and regulated infrastructure needs

# A Structured Operating Model

We assess endpoint maturity, identify risk, and restore operational control where needed.

## !
### Diagnostic & Stabilization

Assess cloud maturity, identify cost and configuration risk, restore operational clarity.

## DAY 0
### Governance & Standardization

Policy alignment, cost controls, security baselines.

## DAY 1
### Operational Management

Azure infrastructure operations, performance monitoring, incident management.

## DAY 2
### Continuous Optimization

FinOps alignment, workload efficiency tuning, cost-performance balancing.

# What We Manage

- Azure infrastructure operations
- Azure Virtual Desktop (AVD) environments
- Cloud cost governance & FinOps
- Performance monitoring & remediation
- Security posture alignment
- Hybrid cloud integration

# What Organizations Gain

**Strategic Outcomes:**

- Predictable cloud spend
- Stronger governance posture
- Reduced operational risk
- Clear accountability for cloud performance

**Operational Outcomes:**

- Reduced cost drift
- Improved workload performance
- Faster issue resolution
- Scalable cloud architecture

## ANUNTA BY THE NUMBERS

**3**
*Years of being Recognized in the Gartner® Magic Quadrant™ for Desktop as a Service (DaaS)*

**1M+**
*users migrated across VDI platforms and AVD*

**14+**
*year focused on VDI and endpoint transportation*

**PCI DSS COMPLIANT**

**SOC 2 TYPE 2** AICPA SOC

**HIPAA COMPLIANT**

**ISO 27001** INFORMATION SECURITY
