

Structured DaaS Operations for Complex Environments

Stability. Visibility. Predictability.

For organizations running Azure Virtual Desktop, Horizon, or hybrid VDI environments, the real challenge isn't deployment — it's long-term operation. DaaS environments often suffer from inconsistent user experience, unpredictable cloud costs, performance variability across regions, and limited in-house EUC expertise, especially when migration projects end without structured Day 2 ownership.

When DaaS is treated as a project instead of an operational discipline, instability follows. Anunta brings structure to DaaS operations — stabilizing performance, governing cost, and providing sustained operational ownership.

anunta®
DesktopReady™

To streamline DaaS design, migration, and ongoing operations, Anunta leverages DesktopReady — our proprietary automation and orchestration platform.

A Structured Operating Model

We assess endpoint maturity, identify risk, and restore operational control where needed.

!

Diagnostic & Stabilization

Assess architecture, performance, and cost drivers. Restore operational clarity.

DAY 0

Design & Readiness

Standardize configurations, policies, image strategy, and governance.

DAY 1

Deployment & Transition

User migration, workload onboarding, structured handoff to managed operations.

DAY 2

Ongoing Optimization

Experience telemetry, cost management, performance tuning, lifecycle governance.

What We Manage

- AVD and Horizon infrastructure
- Image management and standardization
- User profile and application delivery
- Capacity and performance optimization
- Cloud cost governance
- Security posture alignment
- Continuous monitoring and remediation

**Recognized on the Gartner
Magic Quadrant for DaaS three
years in a row.**

What Makes Us Different

- Cross-platform DaaS expertise
- Migration + stabilization + optimization under one operating model
- Deep EUC heritage
- Proprietary accelerators like DesktopReady to streamline deployment and ongoing management
- Integration with endpoint and cloud operations for full-stack control

What Organizations Gain

Strategic Outcomes:

- Predictable DaaS operating costs
- Structured governance and accountability
- Reduced operational risk
- Scalable architecture across regions

Operational Outcomes:

- Improved user experience consistency
- Faster issue resolution
- Standardized environments
- Reduced dependency on internal EUC resources

ANUNTA BY THE NUMBERS

3

*Years of being Recognized in the
Gartner® Magic Quadrant™ for
Desktop as a Service (DaaS)*

1M+

*users migrated
across VDI
platforms and AVD*

14+

*year focused on VDI
and endpoint
transportation*
