Intune Health Check

Strengthen your endpoint foundation.

Devices aren't fully compliant. Policies conflict. App deployments stall. And your dashboards insist everything's fine.

Anunta's Intune Health Check & Diagnostics cuts through the noise. We identify where performance, policy, or process gaps are hiding—and deliver a clear, prioritized roadmap to get your environment healthy, stable, and future-ready.

Why Anunta Intune Health Check?

Intune is only as strong as its configuration. A single outdated profile or unmanaged app can cause:

| Compliance drift across thousands of devices | Hidden security vulnerabilities | Costly re-enrollments or failed patch cycles | Degraded end-user productivity |

Anunta's Engagement Approach

DISCOVERY CALL	**DIAGNOSTICS**	**REVIEW + PLAN**
Define environment scope and objectives	*Secure analysis of your Intune tenant and co-management setup*	*Straight-forward remediation, tailored to your business priorities*

anunta®

What You Get

A comprehensive, expert-led diagnostic of your Microsoft Intune or hybrid co-managed environment, including:

Environment & Configuration Review
- Tenant architecture, role-based access, and enrollment strategy
- Device group structure and targeting logic
- Policy overlap, inheritance conflicts, and deployment health

Compliance & Security Baseline Assessment
- Compliance policy coverage and enforcement success rate
- Security baseline alignment (Windows, Edge, Defender, BitLocker)
- Conditional Access rules and MFA enforcement mapping

Application & Update Deployment Diagnostics
- App assignment status, delivery success rates, and retry behavior
- Win32, LOB, and store app packaging validation
- Update ring analysis (staging logic, deferral impact, rollback strategy)

Device Health & User Experience Analysis
- Enrollment success and failure trends
- Endpoint performance metrics (CPU, RAM, login latency, update lag)
- User impact patterns tied to device type, OS version, or geography

Governance & Operational Maturity
- Naming conventions, version control, and documentation review
- Change management and role delegation structure
- Integration with ServiceNow, Azure AD, or third-party tools

Remediation Roadmap
- Prioritized list of fixes and optimizations (P1–P3)
- Business impact summary—mapped to time savings, compliance lift, and user experience gain

ANUNTA BY THE NUMBERS

88
NPS Score in North America

10k+
endpoints assessed annually

3 years
recognized in Gartner's Magic Quadrant

14+
of digital workspace experience

30k
reduction in ticket volume, post-remediation

GET A HEALTH CHECK

We'll find what others miss—and help you fix what matters.
