

# Workspace ONE Health Check

Strengthen the foundation of your digital workspace.

Over time, Workspace ONE environments accumulate configuration drift, policy overlap, and operational complexity — reducing stability, security, and user experience.

Anunta's Workspace ONE Health Check cuts through the noise. We identify where performance, policy, and process gaps are hiding — and deliver a clear, prioritized roadmap to stabilize your environment and prepare it for what's next.

## Why Anunta Workspace ONE Health Check?

Workspace ONE is only as effective as how it's configured and operated. Even minor gaps can lead to:

Inconsistent  
device  
compliance and  
enforcement

Hidden security  
and access risk

Application  
delivery failures  
and update  
delays

Rising support  
volume and  
slower change  
cycles

*Our health check focuses on how your Workspace ONE environment actually operates today.*

## Anunta's Engagement Approach

### **DISCOVERY CALL**

*Define environment  
scope and objectives*

### **DIAGNOSTICS**

*Secure analysis of your  
Intune tenant and co-  
management setup*

### **REVIEW + PLAN**

*Straight-forward  
remediation, tailored to  
your business priorities*

# What We Assess

A comprehensive, expert-led diagnostic of your Workspace ONE environment, aligned to real-world operations and user impact.

## Environment & Configuration Review

- Workspace ONE architecture and deployment model
- Device enrollment strategy and lifecycle management
- Smart groups, targeting logic, and scope alignment
- Policy structure, overlap, and inheritance behavior

## Governance & Operational Maturity

- Administrative roles, permissions, and delegation
- Naming conventions, documentation, and version control
- Change management and operational ownership
- Integration with identity, ITSM, and supporting platforms

## Application & Update Deployment Diagnostics

- Application deployment success and failure patterns
- Packaging, assignment, and delivery logic
- OS update and patching strategy effectiveness
- Rollback and remediation readiness

## Compliance & Security Baseline Assessment

- Compliance policy coverage and enforcement effectiveness
- Platform security configuration alignment
- Identity and access integration review
- Risk exposure tied to configuration gaps or drift

## Device Health & User Experience Analysis

- Enrollment success and failure trends
- Endpoint performance indicators (login time, resource usage, update lag)
- User experience patterns by device type, OS, or role
- Friction points driving support tickets and user dissatisfaction

## Remediation Roadmap

- Prioritized recommendations (P1–P3)
- Clear sequencing and next steps
- Business impact summary tied to efficiency, risk reduction, and user experience

## ANUNTA BY THE NUMBERS

88
